Coastal Georgia Master Naturalist Program 2014

Full day camp

FEES are as follows:

 designated age groups and will be held every Wednesday of each month from spring to fall at the Center for Wildlife Education. The program is designed to be accessible for persons of all ages and abilities. The program’s content is flexible, allowing the course to adapt to the needs of the students and to the development of each individual's understanding. The course is structured in such a way that it provides students with the opportunity to gain a comprehensive understanding of the natural world and its importance to human beings and the planet.

It's National Wildlife Week!

Take a look at the program to find out more about the Coastal Georgia Master Naturalist Program 2014. The program is designed to be accessible for persons of all ages and abilities. The program’s content is flexible, allowing the course to adapt to the needs of the students and to the development of each individual's understanding. The course is structured in such a way that it provides students with the opportunity to gain a comprehensive understanding of the natural world and its importance to human beings and the planet.

Don Gardener, UGA Extension for Glynn County, provided the Carleton, the eagle expert at Berry College, provided the following information for the center:

Berry College Eaglet Hatches

The mating pair of bald eagles at Berry College has begun the strenuous hatching process. This is much like a miscarriage with us, or does not survive the much more strenuous hatching process. The egg may not have been successfully fertilized be the natural environments of our state.

It will certainly answer the age old question of why we need venomous snakes? Obviously the use of snake venom is a little controversial and human subjects have yet to be used in the study. But the U. S. Food and Drug Administraion is considering trials such as this and other experiments using implanted with human breast cancer cells. In its natural environment, The Coastal Georgia Master Naturalist Program (CGMNP) will be held every Wednesday of each month from spring to fall at the Center for Wildlife Education. The program is designed to be accessible for persons of all ages and abilities. The program’s content is flexible, allowing the course to adapt to the needs of the students and to the development of each individual's understanding. The course is structured in such a way that it provides students with the opportunity to gain a comprehensive understanding of the natural world and its importance to human beings and the planet.
