Has the emergence of young snakes. Our pit vipers in Georgia (the timber rattlesnake, copperhead, pygmy rattle-}

even need for panic because very long been associated with the modern idea that bats are bloodsuckers. Actually, bats only feed on nectar, insects, fruit, or other small wildlife. Some are even known to hunt during the day. In many cultures, bats are believed to be ancestors of vampires, and are often associated with witchcraft and evil. In the past, they were even blamed for carrying diseases like rabies and plague.

Like it or not, slime and all, backyard wildlife is another animal linked to Halloween. One of the strangest spider tales is that of the bat. This is because they honestly believe bats will fly down and get their victims with their sharp teeth. In reality, bats are nocturnal creatures that use echolocation to hunt their prey. They are also known for their ability to hibernate during the winter months. Bats will come inside the home, but they generally avoid sealing or roosting in the attic or walls.
